FM STEREO / FM-AM TUNER

SPECIFICATIONS

FM tuner section

Tuning range	87.5 MHz - 108 MHz
Antenna terminals	300 ohms, balanced 75 ohms, unbalanced
Intermediate frequency	10.7 MHz
Sensitivity at 46 dB quieting (40 kHz deviation)	4 μ V (mono) 43 μ V (30 μ V)* (stereo)
Usable sensitivity	1.4 μ V (S/N = 26 dB, 40 kHz deviation) 1.8 μ V, 10.3 dBf (IHF)
Limiting threshold	1 μ V
Signal-to-noise ratio (40 kHz deviation)	80 dB (mono), 75 dB (stereo)
Harmonic distortion (40 kHz deviation)	0.08% (mono), 0.12% (stereo) at 100 Hz 0.08% (mono), 0.12% (stereo) at 1 kHz 0.1% (mono), 0.2% (stereo) at 10 kHz
IM distortion (40 kHz deviation)	0.08% (mono), 0.12% (stereo)
Separation	45 dB at 100 Hz 50 dB (17 dB)* at 1 kHz 40 dB at 10 kHz

Frequency response	40 Hz - 12.5 kHz ± 0.2 dB 30 Hz - 15 kHz ± 0.2 dB
Selectivity	80 dB at 300 kHz
Capture ratio	1.0 dB
AM suppression ratio	60 dB
Image response ratio	80 dB
IF response ratio	100 dB
Spurious response ratio	100 dB

ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!

LES COMPOSANTS IDENTIFIÉS PAR UNE TRAME ET UNE MARQUE  SUR LES DIAGRAMMES SCHÉMATIQUES, LES VUES ÉCLATÉES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY SHADING AND MARK  ON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

LW 155 - 344 kHz
IF : FM 10.7 MHz AM 450 kHz
AC: 240V ~ 50/60 Hz 12W
SERIAL NO.
MADE IN JAPAN 4-875-306-01

SERVICING NOTES

• THE CERAMIC CAPACITORS

This set uses tube-type ceramic capacitors whose shape is identical with the carbon resistors. Be careful not to use resistors instead of capacitors in repairing.

Disc-type ceramic capacitors can be used for replacing those originally used in the set.

Two kinds of drilled holes are provided in some patterns for mounting the tube-type and disc-type ceramic capacitors. Use appropriate holes where applicable.

Example:

COLOR CODE (in pF)

Color	1st or 2nd Digit	Multiplier	Tolerance	Temperature characteristic
brown	1	10^1		Y
red	2	10^2		D
orange	3	10^3		
yellow	4	10^4		RH
green	5			
blue	6			
violet	7			UJ
gray	8		± 30%	X
white	9			SL
black	0	10^0	± 20%	CH
gold		10^{-1}	± 5%	V
silver		10^{-2}	± 10%	B

● Handling Precautions for MOS ICs

Generally, the insulation resistance of the oxide layer in MOS IC structures is very high, and the oxide layer is very thin. Because of this, it is possible that the static voltages usually present on clothes and the human body will be enough to generate a potential difference across the insulator, high enough to cause a breakdown of the insulating layer.

The following precautions should be taken while handling these ICs.

(Particular care should be taken under conditions of low humidity.)

Precautions in Replacing MOS ICs

1. Store new ICs by inserting them into a urethane-polyester cushion (which is somewhat conductive), or wrapping it in aluminum foil, so that all the pins are at the same potential. (The ICs should be stored in that manner until mounted on the circuit board.)

2. Check the soldering iron for possible power-line leakage current. Make sure that there is no leakage path by connecting an ohmmeter to the tip of the soldering iron and the plug as shown in Fig. C. If there is a leakage path, use some other soldering iron.

3. Equalize any potential difference between the clothes, the tools in use, the work bench, the set being worked on, and the packaged IC by touching them all in succession with the hands or a conductive wire or tool.
4. The following are effective methods for handling ICs that remove the potential difference across the oxide layer.
 - Use a paper clip modified by soldering in a wire braid insert.

Make sure that there is no solder on the inside.

Make sure that all the pins are in contact with the wire braid (all the pins will then be at the same potential.).

- Take a short length of fine bare wire and wind it around the IC so that it shorts all the pins of the IC, while it is still in the urethane-polyester cushion or aluminum foil. This ensures that all the pins are at the same potential.

Fig. G

- When it is necessary to handle the IC with the fingers, do not touch any pin, and hold the IC at the ends of its plastic-package case as shown in Fig. H.

Fig. H

5. Method of Mounting

Insert the IC while holding it with the modified clip, and solder all the pins with the clip still shorting the pins. (Similarly, solder all the pins while the bare shorting wire is still wound around them.). Remove the clip or the bare shorting wire only after all the pins have been soldered.

Precaution while Checking C-MOS ICs

The C-MOS ICs (Complementary MOS) are MOS ICs that have their output sections made up of N-channel and P-channel push-pull stages to increase their speed of operation. If the output terminal of these ICs comes into contact with B+ or B- voltage, then the FET which is ON at that time will either become shorted or open.

This is valid for all the output sections that are connected together by the interconnections. Even the circuits that are physically separated (and not on the same board) can be destroyed simultaneously.

Example:

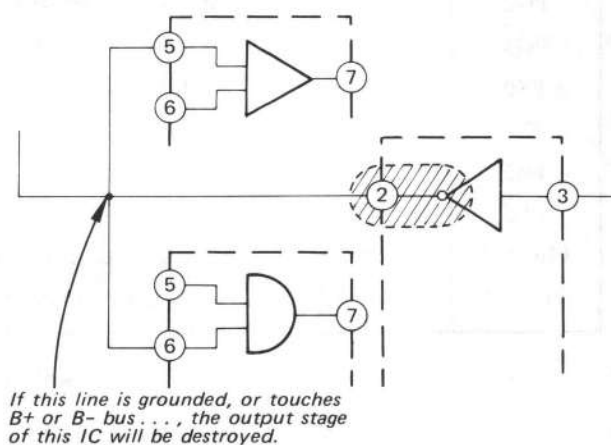

Fig. I

1-2. BLOCK DIAGRAM

1-3. TUNING WITH THE STATION PRESET BUTTONS

With this tuner, owing to an electronic tuning system using a PLL (Phase Locked Loop) synthesizer and a memory circuit, the reception of a station is much simplified. Once you commit the frequencies to memory, pushing a button is all you need do to select a desired station. There is no need to search for the station with the TUNING button each time you wish to tune in a station.

TO MEMORIZE THE STATION FREQUENCIES

Preparation: A total of eight station preset buttons can be preset for either FM, MW or LW in any desired sequence. Arrange the order of stations for each station preset button and note the band and the frequency of each in advance.

Follow the numbered sequence.

Repeat these steps for each station preset button.

Replace the station labels to conform to the selected prememorized stations.

Notes:

- The MEMORY indicator will go off automatically after a few seconds. When the indicator is out, the memory circuit does not operate to memorize the station.
- The previous memory will be erased when a new frequency is committed to the memory of the same button. An erasure cannot be made without a new input.

To memorize a weak station

To memorize MW and LW stations whose signals are weak or whose strength is variable, tune with the SENS switch engaged. To memorize weak FM stations, tune with the SENS switch engaged and the **STEREO (MUTING)** switch disengaged. This will ensure the onetouch memory reception of those stations.

TO CHECK THE PRESET FREQUENCY

After the memory procedure is completed, confirm the prememorized frequency. Press the TUNING button and change the frequency display indication. Press the station preset button to be checked. The frequency which had been pre-memorized should then be indicated in the band/frequency-display window.

TO RECEIVE A PRE-MEMORIZED STATION

Turn the POWER switch on and simply press the desired station preset button.

Memory of the last received station

This tuner includes a memory circuit to remember the station which had been received for more than one second just before the power was turned off. This station will be automatically tuned in when the power is turned on again.

This memory system enables you to make a timer-activated recording from the tuner.

SECTION 2 DISASSEMBLY

Note: Follow the disassembly procedure in the numerical order given.

Top Cover and Front Panel Removal

- ①, ②: top cover
- ① - ⑦: front panel

Bottom Plate Removal

- (1): Loosen the eight screws (BVTT 3 x 6).
- (2): Remove in the direction of arrow.

Note: Do not loose these screws.

SECTION 3

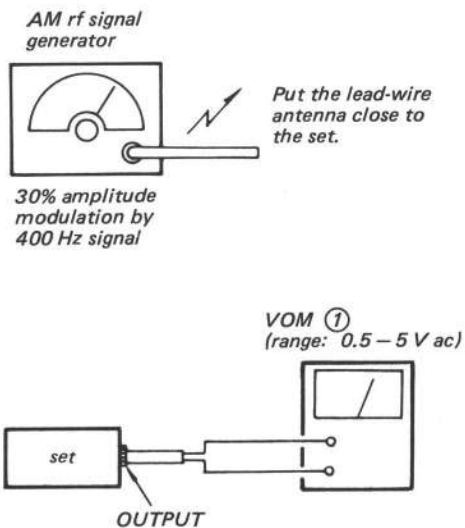

ADJUSTMENTS

MW/LW SECTION

Setting:

Band Selector: MW/LW

Setup: before tracking and frequency coverage adjustments

- Repeat the procedures in each adjustment several times, and the frequency coverage and tracking adjustments should be finally done by the trimmer capacitors.

AM IF ALIGNMENT

Procedure:

Carrier frequency: 999 kHz
30% amplitude modulation by
400 Hz signal
Output level: as low as possible

1. Tune the set to 999 kHz and adjust IFT301 for a maximum reading on VOM (2).

VCO Adjustment

A) Regular Method

Setting:

STEREO/MUTING switch: OFF

Procedure:

FM rf signal generator

Carrier frequency: 98 MHz
Modulation: 400 Hz, 40 kHz deviation (100%)
Output level: 1 mV (60 dB)

1. Tune the set to 98 MHz by pressing the MANUAL TUNING switches.
2. Adjust RV201 for 19 kHz \pm 100 Hz on the counter.

FM SECTION

Setting:

Band Selector: FM

FM Stereo Separation Adjustment

Setting:

STEREO/MUTING switch: ON

Procedures:

FM rf stereo
signal
generator

Carrier frequency: 98 MHz

Output level: 1 mV (60 dB)

Modulation:

Audio (400 Hz): 16.25 kHz deviation (40%)

Pilot (19 kHz): 7.5 kHz deviation (19%)

Sub-channel: 16.25 kHz deviation (40%)

FM stereo signal generator output channel	VTVM connection	VTVM reading (dB)

R-CH	L-CH	Ⓑ Adjust RV202 for minimum reading.
R-CH	R-CH	Ⓒ
L-CH	R-CH	Ⓓ Adjust RV202 for minimum reading.

L-CH Stereo separation: Ⓐ - Ⓑ

R-CH Stereo separation: Ⓒ - Ⓓ

The separations of both channels should be equal.

RV202

RV203

CAL TONE Level Adjustment

Setting:

CAL TONE switch: ON

Procedure:

Adjust RV203 for 0.39 V (-6 dB) reading on the VTVM.

RV101

FM Muting Level Adjustment

Setting:

STEREO/MUTING switch: ON

Procedure:

Carrier frequency: 98 MHz
Modulation: 400 Hz, 40 kHz deviation (100%)
Output level: 10 μ V (20 dB)

1. Tune the set to 98 MHz by pressing the MANUAL TUNING switches.
2. Adjust RV101 for a 0 V reading on the VTVM.

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "▲" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF . Common capacitors are omitted. Refer to the following lists for their part numbers.
MF: μF , PF: μpF .

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.

- F : nonflammable

COILS

- MMH : mH, UH : μH

The components identified by shading and mark ▲ are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque ▲ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "Δ" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers. MF: μF, PF: μμF.

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.

- F: nonflammable

COILS

- MMH: mH, UH: μH

The components identified by shading and mark Δ are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque Δ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "▲" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (▲-△△△-△△△-XX or ▲-△△△△-△△△-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF . Common capacitors are omitted. Refer to the following lists for their part numbers.
- MF: μF , PF: $\mu\mu\text{F}$.

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.
- F: nonflammable

COILS

- MMH: mH, UH: μH
